

Southernmost Tattoo Aftercare Guide

You've got fresh ink, and we want it to stay fabulous! Follow these steps:

Traditional Aftercare:

Clean: Gently clean with antibacterial soap & warm water. Pat dry.

Moisturize: Apply a thin layer of tattoo ointment 2-3 times daily.

Avoid: Swimming, hotubs, sunbathing, or picking at scabs.

Healing Time: 2-4 weeks.

Saniderm Aftercare:

Initial Wrap: Leave it on for 4-7 days.

Clean: Gently clean area if necessary, let dry.

Reapply Saniderm: If instructed, or follow standard instructions above

Moisturize: After removing, moisturize as with traditional care.

Healing Time: Similar to traditional, but often smoother!

Do not be alarmed if fluid builds under the wrap

General Tips:

Always follow your artist's specific instructions.

If you notice any signs of infection or other issues, contact your artist or a healthcare provider. Infections come from outside environments not from the tattoo process.

Remember, patience is key to a beautifully healed tattoo!
